METRO - Metallurgical Training On-line

METRO Metallurgical Training On-line

The Basic Idea of METRO

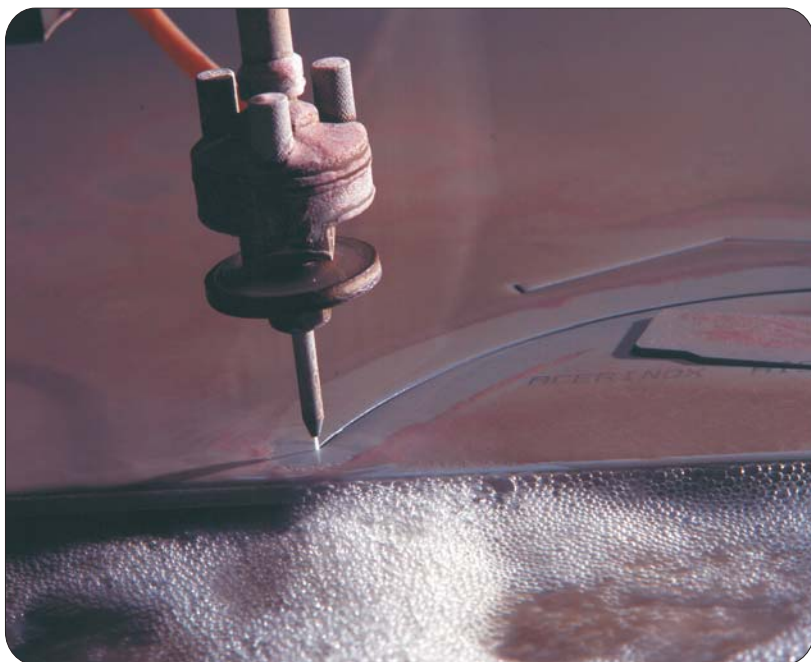

Training and courses are really and strongly needed, but the **time available** for participating is always **shorter**:

completely **re-consider the training activities** offered and the **methods** adopted for carrying them out.

METRO ("Metallurgical Training On-line") wants to set up an innovative action

High quality Training Courses completely "**free**" from the conventional operative methods with the help of modern **e-learning** technologies:

- followed by "remote students"
- distributed in a "tailored" way

The Structure of METRO

Set up of Courses

Technological Implementation

Testing & Evaluation
